Profile

PHP developer with almost five years of experience building production applications in PHP and Laravel, from REST APIs and admin dashboards to WordPress sites. At Rev9 Solutions I built the Laravel APIs behind the Muslim Match Makers app, delivered Inn'vision full stack and was the only engineer on ScanPass; before that I spent over three years at AH Media & Marketing on client projects, growing from intern to Software Engineer. I work comfortably with MySQL, Laravel Blade and React, and graduated with a Gold Medal in BS Information Technology.

Skills

PHP	PHP, Laravel, Laravel Blade, REST API design, WordPress, object-oriented programming
Database	MySQL, data modelling, schema design, indexing, query optimisation, caching
Laravel features	Authentication, role-based access control, validation, jobs and queues, events, scheduled tasks
Integrations	AWS Lambda, Amazon S3, third-party APIs
Frontend	JavaScript, React, HTML, CSS, Bootstrap
Delivery	Git, GitHub, GitLab, code review, CI/CD-based release workflow, Postman test scripts, functional and manual testing, Agile and Scrum

Experience

Backend Developer, Rev9 Solutions — Jun 2024 – Aug 2025

Jhelum, Pakistan. Full time, on site. Joined as a Backend Developer Intern (Mar – May 2024).

- Built the Laravel REST APIs behind the **Muslim Match Makers** Flutter app, working with the Flutter developers and an AI/ML team: multi-step forms that resume from the last completed step, premium membership logic and profile display rules (batches of 10, no repeats within 24 hours).
- Delivered **Inn'vision**, a hotel management and booking system, full stack alongside a product designer: role-based dashboards for admins, hotel owners and customers, admin approval workflows, multi-parameter search and sorting, OTP verification, booking logic and a live weather API.
- Sole engineer on **ScanPass** (Sorority Pass), a membership, registration and account-management platform for Greek organisations and community groups, covering system design, data modelling, API design and deployment.
- Implemented token-based authentication, role-based access control, OTP and ID verification, server-side validation and secure environment configuration.
- Improved performance with caching, indexing and query optimisation, and moved background work to jobs, queues, events and scheduled tasks.
- Integrated Laravel controllers with AWS Lambda functions and used Amazon S3.
- Contributed to payment integration and webhooks alongside a senior developer.
- Worked in Agile and Scrum with requirements gathered directly from clients; used Git and GitLab with senior code review and a CI/CD-based release workflow with regular production releases.
- Tested APIs with Postman scripts alongside functional and manual testing, and handled logging and production troubleshooting.
- Received the Rev9 Solutions Appreciation Award (2025).

Software Engineer, AH Media & Marketing — Jan 2021 – Jun 2024

Jhelum, Pakistan. Progressed from Software Engineering Intern.

- Built backends in PHP and Laravel, REST APIs and WordPress sites for client projects.
- Grew from Software Engineering Intern to Software Engineer over three years, working full time (hybrid) until February 2024, then part time and remote.
- Client work is covered by a confidentiality agreement (MoU), so project specifics are not shared.

Research

MRes dissertation: **Predicting Fashion Trends using Multilingual Sentiment Analysis of Instagram Data**. Designed architecture-first and built in Python as separate modules across 17 phases: data collection, cleaning and language detection, a TF-IDF and logistic regression baseline, a fine-tuned XLM-RoBERTa model, and evaluation with accuracy, precision, recall, macro F1 and confusion matrices.

Selected projects

Study Sphere | Laravel, MySQL | Final-year project, University of Gujrat, 2024
All-in-one education platform with role-based dashboards for teachers, students and guardians: courses, content, assessments, discussion boards and chat.

Do-Do | Laravel | Personal project, 2024
Task management system for creating, prioritising and tracking tasks, with APIs tested in Postman.

Perfumelle | React | Personal project, 2025
A private perfume display website.

Portfolio | React, GSAP | Personal project, 2026
My own site at syedamomnabatool.vercel.app, built with React and GSAP.

Education

MRes Artificial Intelligence — **2025 – 2026**
University of Greater Manchester, Bolton, UK
Completed with Distinction.

BS Information Technology — **2020 – 2024**
University of Gujrat, Pakistan
Gold Medal, 1st position. GPA 3.79 / 4.00.

FSc Pre-Engineering — **2018 – 2020**
Govt. Associate College for Women, Civil Lines, Jhelum

Certifications

- AWS Academy Graduate: Machine Learning for Natural Language Processing (2026)
- AWS Academy Graduate: Cloud Foundations (2026)
- Programming for Everybody (Getting Started with Python), University of Michigan (2023)
- Introduction to HTML5, University of Michigan
- Getting Started with Front-End and Web Development, IBM

Awards

- Appreciation Award, Rev9 Solutions (2025)
- Gold Medal, 1st position, BS Information Technology (2024)
- Roll of Honour (2024), Excellent Academic Performance (2023), Student of the Year (2022)

Activities and memberships

- AI Ambassador (volunteer), InnovateHer: helping close the gender gap in tech by delivering AI assemblies and role model talks in schools, starting at North Chadderton School (2026).
- Supporting the University of Greater Manchester organising team with planning and coordination of the “November to Remember” series, alongside IEEE (2026).
- IEEE Student Member: Computer Society, Women in Engineering, Young Professionals (since 2025).
- One-to-one tutoring in programming, databases, OOP and project management for secondary, college and university students during my degree (2020 – 2024).
